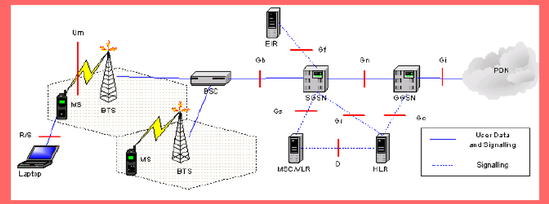
Basic Cellular System

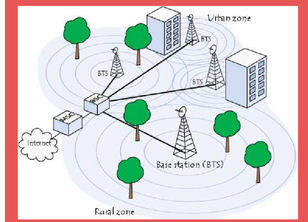


A Basic Cellular System is a wireless communication network that divides a large area into smaller cells, where each cell has a base station to provide voice and data services to mobile users.

Mobile Station

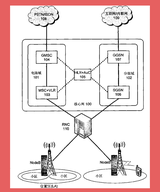
A Mobile Station (MS) is the user's mobile device that communicates with the nearest BTS using radio signals.

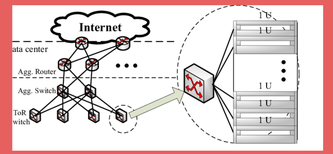
Base Transceiver Station (BTS)



A Base Transceiver Station (BTS) is a radio equipment that connects mobile users within a cell area to the cellular network.

Mobile Switching Center (MSC)





A Mobile Switching Center (MSC) is the central switching system that routes calls and connects the cellular network to external networks like PSTN and Internet.

PSTN / Internet

PSTN is the traditional landline telephone network, and the Internet provides data services connected through the MSC.
